Report of Bacteriological Examination of Water Sample

Samples collected by - Lyman - Sanitary Services
Date of Collection - 5-28-75
Place - 1000 W. Edgewood
Owner of water supply -
Date reported - 5-28-75

Lab. No.	Source of Sample	Chlorine Residual ppm	Staphylococcus per 100 ml.	Fecal Membrane Filter Fek. Coliforms per 100 c.c.	Nitrate Nitrogen ppm
864	drainage at curb line			28	

The above examinations were made by the City of Springfield, Department of Public Health Laboratory in accordance with the latest edition of Standard Methods of Water Analysis of the American Public Health Association. At the time this examination was made, the sample _____ exceeded _____ the limits acceptable for drinking purposes.

The safety of a water supply depends upon proper construction and protection against contamination. A favorable bacteriological analysis alone should not be accepted as conclusive evidence of the safety of a water supply unless a survey of the supply indicates no sanitary defects. It is recommended that a water supply used for drinking purposes be analyzed routinely.
